

Is Your Trailer over 2000kgs?

GET CONTROL AND PERFORMANCE WITH
BRAKERITE
by TITAN
HYDRAULIC BRAKE CONTROLLER

TITAN® Trailer Brakes introduces the **ALL NEW BRAKERITE** electro/hydraulic brake controller for ALL towed trailers over 2000kgs.

Whether towing your heavy loaded trailer, caravan or horse float down the Bulli Pass or down the Toowoomba Range you will want to feel safe and relaxed. **TITAN® Trailer Brakes** will do that for you! **TITAN® Braking Systems** gives the desired power for optimum braking control by utilising the latest high pressure hydraulic pumps and totally protected 12VDC motor. The **BrakeRite** will easily operate single, tandem and triple axle hydraulic brake systems. The **BrakeRite** has a larger more reliable motor/pump assembly that will maintain pressure for a longer period of time with less heat generation from a bigger 75cubic inch reservoir. Longer time between brake fluid top-ups. Less maintenance.

The pump and motor in the **BrakeRite** are mounted vertically to reduce stress in mounting bolts and to take weight off the armature shaft and bearings. Only **BrakeRite** has super sized circuit components to prevent early burnout and offers a more reliable and longer life. **TWO** diaphragm filler plugs that seals the brake fluid away from the moisture laden air. With the full 1500psi needed to operate good safe hydraulic disc brakes and full brake fluid flow for rapid response, you know your **TITAN® BrakeRite** braking systems is behind you.

Exceeds Australian Design Rule 38/02

30% Faster Braking Response
30% Shorter Stopping Distance
30% Higher Brake Pressure

HAYES G2 in-cab controller

Emergency Battery Kit

Typical Marine Installation

TITAN Trailer Brakes

SUITABLE FOR SINGLE , TANDEM & TRIPLE AXLE BRAKING
Matches perfectly with the complete range of **TITAN®** unique **BRONZE** and ventilated **STAINLESS STEEL** hydraulic disc brakes.
